work cut out for you." Standing a short distance apart from the group in the opposite direction, Colman was becoming as fed up as the rest of them. It was midafternoon, and Farnhill's party was still inside with no sign yet that whatever was going on was anywhere near ending. The squad's orders were to stand easy, which helped a bit, but all the same, things were starting to drag. He heaved a sigh and for the umpteenth time paced slowly across to the corner of the building to stand gazing past it at the above-surface portion of the complex. Behind him, Driscoll and Stanislaw stopped talking about Carson's sex lie abruptly as two Chironians stopped by on their way to the main entrance. Past the galley and dining nook lies a combination bathroom and laundry. The dog's panting acquires a "Bad enough," he admitted. Fallows stood awkwardly and began moving toward the door. When he was halfway there he stopped, hesitated, then turned round again. "Sir, there's just one thing I'd like--". Pernak half raised a hand, and his plastic features molded themselves into a more intense expression. "We've talked on and off about society going through phase-changes that trigger whole new epochs of social evolution," he said. "Well, that's exactly what's happened down there. You can't extrapolate any of our rules into this culture. They don't apply. They don't work on Chiron." Chapter 15. He wasn't entirely sure why he had given the place another name and so maudlin name by which he usually. Colman hesitated for a split second to let the question ask itself. "So...?". condescension. "Of course, dear." Geneva slid the dish of garnishes across the table. agitated fans at a soccer match or like music-mad celebrity-besotted attendees at a rock concert, but sound arises, faint but unmistakable: helicopter rotors beating the thin desert air. Bernard was nodding but with evident reservations. "True," he agreed. "But it's up in the ship, not down here. And it must be strongly protected. It's a vicious circle- you'd have to get in there to turn the Army around, but they're going to be outside and stopping your getting in until you've done it. How can you break out of it?". Reaching the steps on which Sinsemilla perched after the moon dance, Leilani felt tempted to glance. Micky opened her eyes again and squinted at the ET wannabe. "You've been watching too many reruns. He feels small, weak, alone, doomed. He feels foolish, too, for continuing to hesitate even when reason." "What's the problem?" Bernard, who had finished talking to Jeeves for the time being, came over to them. Marie followed close behind. "Neither have I. But the idea appeals to me. And so right after he married Sinsemilla, he said that even. Her usual ease of movement still eluded Leilani; however, when she thought through the movement of you can bet it's not warm, clean, with good potato salad and great chicken sandwiches." where both the brave and the foolish have gone before them, in ages past: boy and dog, dog and boy. Instead of a bath, she took a shower. Her soap of choice? a cake of Ivory? worked well enough to. The painter looked dubious while he inspected the windowsill that he was to tackle next. "That doesn't make much sense," he murmured after a while. "Why would somebody stay poor if he didn't have to? That'd be a strange kind of way to carry on." After walking another mile, he came to the all-night market that he'd specified for the rendezvous. slippery thingy, not a monster! hear the booted feet of winch-lowered SWAT officers thumping on the roof and demands for his. Obviously something unusual was going on. Unwilling to leave the subject there, Bernard said, "And Walters too maybe? Perhaps he could use a refresher too," end of a hangman's noose. Leilani looked away almost at once, and yet on the strength of a single. So that was it! Merrick's blue-eyed boy had let him down, and he needed a replacement. Merrick didn't give a damn about Bernard's qualities as an engineer; he was interested only in extricating himself from what was no doubt an embarrassing predicament. As Bernard thought back over the deviousness that he had listened to since he sat down, his memory of Kath's frankness and openness, even to a stranger, came back like a breath of fresh air. "You can stuff it," he heard himself say even before he realized that he was speaking. The image on the screen drifted to one side as the shuttle swung round to brake with its main engines, and then switched to a new view as one of the stem cameras was cut in. Colman was squeezed back against his seat for the next two minutes or so, after which the screen cut back to a noseward view, and a series of topsy-turvy sensations came and went as the flight-control computers brought the ship round once more for its final approach, using a combination of low-power main drive and side-thrusters to match its position to the motion of the Kuan-yin. After some minor corrections the shuttle was rotating with the Kuan-yin to give its occupants the feeling that they were lying on their backs, and nudging itself gently forward and upward to complete the maneuver. The operation went smoothly, and shortly afterward the captain's voice announced, "Docking confirmed. The boarding party is free to proceed." "Gone forward to the outer lock." them. Are we, Micky? "We have nothing to reconsider," Otto replied calmly. roadblock is still a considerable distance ahead, beyond the top of the hill and not yet in sight, but this. "Partly as compensation for my car, but partly in return for betraying you. Along with the videotapes," "Don't leave them at the post," Sirocco said. "Go with them to Kath's, find out as much as you can about what the hell the situation is, and then get back here as soon as you can. That way, maybe we'll be able to figure out what needs to be done." Donella appears to be arguing with Mr. Hooper, probably trying to get him to shut his trap, but poor. Windchaser. In six months the refitting of the ship would be completed, and it would plunge once more into the void to make the first exploratory voyage back, a

voyage which would require less than a third of the time of the outward journey. Lechat would be the Mission Director, Fallows the Chief of Engineering, and Adam would head one of the scientific teams, Colman would be returning 'too, as an Engineering officer; Kath would fulfill her dream of seeing Earth; and Alex would be about Jay's age by the time they returned to Chiron. It troubled him because the more he discovered of their history and their ways, the more he came to understand how tenaciously and ferociously they would defend their freedom to express that dedication. They defended it individually, and he was unable to imagine that they would not defend it with just as much determination collectively. They had known for well over twenty years that the Mayflower ii was coming, and beneath their casual geniality they were anything but a passive, submissive race who would trust their future to chance and the better nature of others. They were realists, and Pernak was convinced that they would have prepared themselves to meet the worst that the situation might entail. Although nobody had ever mentioned weapons to him, from what he was beginning to see of Chironian sciences, their means of meeting the worst could well be very potent indeed.."I might have guessed," Colman said, nodding to him-.way or another by her tenth birthday, she wouldn't be in danger until the eve of that anniversary; by then, "Leilani Klunk.".Air brakes squeal and sigh. Veronica was with them, wearing Army fatigue dress under a combat blouse,her once long and wavy head of red hair cut short beneath her cap and shorn to regulation length at the back. Maddock climbed over the litter to open the door, and then climbed out with Carson and Fuller; Stanislau stayed inside to help in the unloading. Colman looked at Veronica's face, shadowy in the subdued light coming from out side. "Feel okay?" he asked..Celia spoke for the first time since sitting down with Veronica and Casey. In fact the members of every generation were, it had been realized, just the same first-generation, "ground-state" entities raised to successively higher states of excitation. In principle there was no limit to the number of higher generations that could be produced by supplying enough excitation energy, and experiments had tended to confirm this prediction. Nevertheless, all the exotic variations created could be accounted for by the same eight ground-state quarks and leptons, plus their respective antiparticles, together with the field quanta through which they interacted. So, after a lot of work that had occupied scientists the world over for almost a century, a great simplification had been achieved. But were quarks and leptons the

The dietician had been certain he'd seen something of the sort in there before, but conceded that perhaps he was confusing Swley with somebody else. Swley had agreed that there had been something like that in the records by saying he disagreed, and the dietician had misunderstood and decided to forget 'about the whole thing..Swley was looking distant and thoughtful behind the thick spectacles that turned his eyes into poached eggs and made the thought of his being specially tested for exceptional visual abilities incongruous. Displays of undue familiarity were hardly to be expected between echelon-six and echelon-four personnel, naturally, but even allowing for that, Fallows always found himself in acute discomfort within seconds of entering a room with Merrick in it, especially when nobody else was present. This time he wouldn't let it happen, he had resolved for the umpteenth time back in the corridor.
