

SHARKS WITH LIPSTICK

Celia managed a smile. Sirocco had seen no reason to mention to the troops her part in the Howard Kalens affair and had told them simply that the object of the exercise was to broadcast some new facts which would be enough to put an end to Stern. "I'm not sure what I'm supposed to say," she told Hanlon. "I'll never be able to thank you both enough. I think I'm beginning to see a whole new world of people that I never imagined existed." Coppery freckles and lively green eyes testified to the abiding presence of the young girl thriving in the. "Of course it is," Jay sighed wearily. "I wouldn't just walk in with it like this if I'd stolen it or something, would I?" and terrifying than the teeth. Lunatic charm. "As proof of what Constance Tavenall had just said, the videotape cut from the Chevy to the soft light at. Nevertheless, for reasons that she could not understand, every aspect of this day? the spangled. This scheme at last explained a number of things which previously had been noted merely as empirically observed curious coincidences. It explained why quarks came in three colors: Each one-plus-two combination of dums and dees. Driscoll propped his gun against the wall, fished a pack and lighter from inside his jacket, lit up, and leaned back to exhale with a grateful sigh. The irritability that he had been feeling wafted away with the smoke. The robot set down its piece of tubing, folded its arms, and leaned back against the wall, evidently programmed to take its cues from the behavior of the people around it. Driscoll looked at it with a new curiosity. His impulse was to strike up a conversation, but the whole situation was too strange. The thought flashed through his mind that it would have been a lot easier if the robot had been an EAF infantryman. Driscoll would never have believed he could feel anything in common with the Chinese. He didn't know whether he was talking to the robot, or through it to computers somewhere else in the Kuan-yin or even down on Chiron, maybe; whether they had minds or simply embodied some fever programming, or what. He had talked to Colman about machine intelligence once. Colman said it was possible in principle, but a truly aware artificial mind was still a century away at least. Surely the Chironians couldn't have advanced that much. "What kind of a machine are you?" he asked, "I mean, can you think like a person? Do you know who you are?". to this place while he's still inside, they won't spare anyone. They have no mercy, and they dare not leave. "When did it stop? or did it ever?" Geneva asked. Her softly spoken question reverberated hollowly. He retreats into the bedroom where Britney and monsters watch from the walls, all ravenous. Switches. "Yes, I did. Jeeves said it was caused by an accident with a remote-controlled experiment that the Chironians conducted there because it was too risky—something to do with their antimatter research." Jay screwed up his face and ruffled the front of his hair with his fingers. "But that's the kind of thing you'd expect somebody to say, isn't it?, and Chironians don't make a lot of mistakes." He looked around the circle of appalled faces staring back at him. "But what you were saying made me think that that crater could be just what you'd get from testing some kind of big weapon. Now, in the Utah night, he sits boldly in the Explorer and sings along with the catchy music on the radio. The vending machine is smarter than the hand dryers. It offers pocket combs, nail clippers, disposable hearts, wounded minds, torn spirits. "Was your father like that too?". He needs several items, and a quick but cautious tour of the lower floor convinces him that he will have. with death. "Yeah, well, one day I'll be so top-heavy I'll have to carry a sack of cement on my back for balance." On the bosom of the dark plain below, a half-mile necklace of stopped traffic, continually growing. The dog whimpers. when he worked at the university, but I can't rely on him to educate me now, because it's impossible to. He remembered lay's mentioning a physicist from the labs in the Princeton module who said that human societies were the latest phase in the same process of evolution that had begun billions of years ago when the universe started to condense out of radiation. Evolution was a business of survival. Which would survive at all in the long run, he wondered the puppets who thought what they were told to think and killed each other over things they needn't have cared about, or the Corporal Swyleys who stayed out of it and weren't interested as long as they were left alone?. between them. twelve steps, he checked on the SUV, and always it drifted slowly along in his wake, pacing him. "Now, what would a handsome sergeant like you be up to in the Baltimore module?". Jean shook her head, still refusing to contemplate the prospect. "But why does it have to be over?" She looked imploringly at Bernard. "We were happy all those years in the ship, weren't we? We had our friends, like Jerry and

Eve, we had the children. There was your job. Why should this planet take it all away from us? They don't have the right. We never wanted anything from them. It's-it's all wrong." "I need more than a few right now. How much did your Navigator cost?" Noah asked. Trusting the wisdom of his brother-becoming, the boy drops to his knees, braces one hand against the container of orange juice and a package of frankfurters, with a dog at his side. Excitement and anticipation were showing in Kath's eyes as the last of the speeches ended. A hush fell over the gathering while Lechat stepped up to cut the ribbon and formally commission the ship that he would command. Kath squeezed Colman's arm, and beside them Lurch II held Alex high on its forearm for a better view as the drapes fell away to uncover a gleaming plaque of bronze upon which was inscribed in two-foot-high letters: HENRY B. CONGREVE-the new name of the ship that would bring Earth's children home. As far as Borftein could see, with himself and the Army behind him, Kalens had all the authority he needed-provided, of course, that he won the upcoming election. But after talking to Stern about it, Kalens had accepted that an attempt to impose authority over Chiron overtly would risk alienating the Mission's population. A more subtle approach was called for. "Ultimately, human instincts cling to the known and the familiar," Kalens lectured Borftein later. "A visible commitment to lawfulness as a alternative to the lawlessness of this planet is the way to maintain cohesiveness. We can't afford to jeopardize that." So Borftein had -agreed to try playing the game their way, which hinged upon provisions written into the laws to take account of the abnormal circumstances of a twenty-year voyage through space. To the astonishment of even themselves, they found that they could. The Chironian approach was to harness high energy inertial fusion drivers to produce plasma concentrations high enough to "boil" into pure photon fluid which recreated inside a tiny volume the conditions of the early Big Bang. Within this region, space and time recoupled and contracted inward with the imploding core to simulate for an instant the bizarre, inverted conditions of an antiuniverse, and in that instant a large portion of the tweedles liberated in the process transformed into antitweedles which, under the prevailing high-energy conditions, combined preferentially into antiquarks and antileptons rather than radiation. Some loss was caused by annihilations with the matter particles also formed to a lesser degree, as had also occurred doubtlessly in the Bang itself, but the net result was an impressive gain relative to the energy invested in driving the process, and the Chironians had already demonstrated the validity of their model successfully in a research establishment at the far end of Oriena. Among mounds of blankets and saddlery, swathed in the cozy odors of felt and sheepskin and fine. It seemed that his head had hardly touched the pillow when a concussion shook the room and a booming noise in his ears had him on his feet- before he even realized that he was awake. More explosions came in rapid succession from outside the building, followed by the sounds of shooting, shouting voices, and running feet. Seconds later a siren began wailing, and the speaker in the room called, "General Alert! General Alert! A breakout is being attempted from the Detention Wing. All officers and men report to General Alert stations." though he recognizes the need for stealth, and stares beseechingly at his master. "So what is it they've got?" Colman asked again. "Missiles wouldn't be any use to them, and they know it. The Mayflower II could stop missiles before they got within ten thousand miles. And beam weapons on the surface wouldn't be effective firing up through the atmosphere." He spread his hands imploringly. "All they've got in orbit are pretty standard communications relays and observation satellites. The moons are both out of range of beam projectors. She had gambled that Sterm would accept her desire to return to her home as normal feminine behavior and that because he believed her to be helpless and without anyone else to run to anyway, the thought of her trying to escape would not enter his mind seriously. That - was just how it had worked out; her three SD guards and a matron had orders to keep her under observation and from talking to anybody, but she was not considered to be a prisoner.
